*SGT Pete W.
Stamford, Connecticut
Police Marine Unit*

"When the original seat posts in our 30' Aussie Cat Patrol Boat failed nearly five years ago, we replaced them with Seaspension Solo posts.

We operate year around in all conditions, frequently at high speed. In addition, one of our officers is over 115 KG (260 lbs) which puts a lot of strain on the posts. In the 5 years we have been using Seaspension, we have never had a problem or complaint with them. They have worked well to increase comfort, safety and endurance of our patrol officers. We like Seaspension so much that we specified their installation in our newest Rocksalt aluminum patrol boat, and will specify them in all future boats".

*Ronald H.
TP Marine
The Netherlands*

"TP Marine has been installing Seaspension in several of our boats for our North Sea customers who demand high performance shock-mitigation for their offshore work including wind farm service. We have been very happy with the performance of the Seaspension seats, as well as the value that they provide to us and our customers".

SEASPENSION TECHNOLOGIES, INC. designed **SEASPENSION®** shock-mitigation technology for those who make their living protecting our borders.

SEASPENSION recognizes that many law enforcement boat operators are particularly prone to experience some form of discomfort, or suffer mild to severe musculoskeletal injuries when navigating a high-speed craft. It has become very evident that exposure to shock loads, either from repetitive jolts or from high impact single occurrences, is an increasing risk.

SEASPENSION® will change your boating experience as it offers a level of comfort and safety never before achieved. We have designed **SEASPENSION®** with law enforcement, research, fisheries, tourism, and other commercial activities in mind.

THE SEASPENSION® SHOCK-MITIGATION SOLUTION

THE PROBLEM

Repetitive Exposure to Shock Induced by Prolonged High-Speed Boating.

- Increases fatigue
- Reduces operational effectiveness
- Results in chronic injuries
- Expensive injury claims
- Lost time on the job

THE SOLUTION

Versatile **SEASPENSION®** Shock-Absorbing Solo Crew, Bench Crew and Helm Station Seats.

- Significantly reduces shock levels
- Designed to withstand rugged marine use
- Low cost means large savings
- Low weight allows additional payload
- High performance occupant protection
