## Seaspension provides shock-mitigating seats for President Obama's security detail at the Summit of the America's.

Shock-mitigation technology allows security detail to operate more effectively at high speeds in high seas conditions.

**Largo, FL, April 16, 2009:** Seaspension Technologies, Inc., delivered custom shock-mitigating seating for use in twelve high speed patrol boats to be used as part of the security force for the upcoming Summit of the America's in Trinidad on April 17-19, 2009. The security boats were produced by Edgewater Power Boats of Edgewater, Florida and were delivered to the Trinidad Coast Guard. The dual bolsters came equipped with Seaspension's Shock-Gard Technology (SGT™) package and built-in intercom systems. The Seaspension SGT™ seating system allows Coast Guard personnel to operate their boats in rigorous conditions such as those experienced during the first delivery sea-trial with six-to-eight foot waves, wind speeds of twenty knots and boat speeds of up to 50 knots. During the trial the crew remained comfortably seated, safe, alert, and focused on their mission. Seaspension Technologies met all delivery requirements on time for the 28 custom dual bolsters in collaboration with Premier Performance Interiors (PPI) of Sarasota, Florida. The order was taken with an accelerated delivery schedule to meet the deadline requirements for this conference which will be attended by many of the world's leaders including President Obama.

Seaspension Technologies designs, manufactures and markets a variety of innovative, high performance shock mitigation systems. They supply cost-effective solutions to military, commercial, OEM & recreational boating markets. For additional details or to make an inquiry please contact Peter J. Burer via phone at 727-216-9639 or via email at [info@seaspension.com](mailto:info@seaspension.com)
