Seaspension shock-mitigating seats smooth the ride in United States Coast Guard “Iceboats.”

Largo, FL, July 10, 2009: Seaspension Technologies, Inc. delivered custom shock-mitigating seating for use in thirty-five specialized emergency rescue airboats (Iceboats) used by the US Coast Guard. The custom tri-pod bolster seat is designed to protect the crew from jolts experienced when the boat changes its surface from land, ice, and water and during operation in rugged conditions. The custom design shown below features a 5-point harness and a seat supplied by Premier Performance Interiors (PPI) of Sarasota, FL. The Iceboats are built by Midwest Rescue Airboats of Lawrence, Kansas as part of a five year contract with the US Coast Guard.

Seaspension Technologies designs, manufactures and markets innovative, high performance shock-mitigation systems. Their cost-effective solutions are used by military, commercial, OEM & recreational boating customers. The latest information on Seaspension and its products can be found at www.seaspension.com.
